

If your company sells products in the global market, localization is the key to your success. Localizing products in-house can seem like the simple solution, but it can tie up valuable personnel and resources, slowing overall progress. By outsourcing your localization needs to a trusted vendor, you free your company to do what it does best. And most importantly, you can be sure that localization will be performed by professionals with the specialized skills and technical resources required for high quality localization.

*It's time to find a reliable partner.
Someone you can trust as much
as you trust yourself.*

You've Decided to Outsource. Now What?

There are lots of localization vendors to choose from, and many of them offer complete one-stop shopping. But how can you find a reliable vendor who is just right for your company?

We hope that these materials will help you make the right choice.

Looking forward to being
Your localization vendor

First you have to decide:

What tasks are you going to outsource?

Where do you want to find a partner?

Who will be your Localization Vendor?

We don't change your product. We make it available!

Commitment to quality

We work hard to provide the highest quality localization services. In order to stay on top, we have studied all the latest advancements in the field of Quality Assurance and have developed our own Quality Assurance procedures. We can proudly say that we now know how to create Quality.

Our advantages

Professional project management

Many clients tell us Palex has the most professional project management they've ever encountered. After all, being responsive to clients is the founding principle of our corporate culture. We always establish personal relationships and think ahead to predict our clients' expectations. We also have developed proprietary training programs for localization project managers. As a result, each manager meets our strict requirements and quickly adapts to our style of working.

Flexible pricing

While there are costs that cannot be reduced without risking quality (translation, proofreading, DTP), our structure and location allow us to lower our project management and other related costs. We are in a unique position to offer our clients the skills of first-rate professionals at an affordable rate.

Use of professional translators

Our QA procedure requires that translators be selected extremely carefully. We use only native translators who have proven experience in the field. Sometimes this is more expensive, but skilled translators are absolutely necessary to ensure quality.

In-house quality control

In addition to proofreading, we check each translation using special QA software to make sure that the text and its translation are a perfect match. We also perform manual quality control as required by our QA procedures.

Modern technology and the best software

We have experience working with practically all localization software. That means we can select the most suitable tool for your project and give you advice when you need it.

Complete confidentiality

No comments. We just guarantee this. To ensure the confidentiality of our projects, we use an array of modern technologies, including encryption tools.

Palex Languages & Software is a leading Russian Localization Service Provider headquartered in Tomsk. From our founding in 2002, we have focused on complex projects requiring the cooperation of highly qualified teams of translators, editors, programmers, engineers, designers, audio engineers and voiceover talents. We have built our localization practice around our understanding of the need for seamless collaboration.

The main goal was to create a regional language company with strong QA process and professional project management specializing in Russian and other languages of the former U.S.S.R.

Our History

We have been constantly improving our workflow, training our team and doing our best to provide our clients with quality, cost-effective services. That is appreciated by most of our clients and Palex has experienced a steady growth since its foundation.

By 2004, Palex had quadrupled in size, with five times the number of clients and a ten-fold increase in turnover. From that time Palex started to expand the number of supported languages, growing from a small regional vendor to a mid-sized multi-language vendor.

Today, the company has two working facilities: a head office in Tomsk, Russia, and a branch office in Almaty, Kazakhstan; and a company representative in Stuttgart, Germany.

With 75 employees and over 500 specialists worldwide, Palex can deliver high-quality translations into over 50 languages.

Palex Languages & Software is certified under ISO 9001:2008 and DIN 15038:2006 and is proud to be a member of LISA and GALA.

Our achievements in 2009:

- Number of clients increased by 10%
- Over 20,000,000 words translated into 52 languages
- Five of the Top 25 companies in the localization market are our clients
- We received EN ISO 9001:2008 certification
